

ABOUT THIS REPORT

This report was produced using live on the market sales and rental listing data for properties in suburbs that border a major body of water such as oceans, lakes or inland waterways. We have maximised accuracy by only publishing those suburb results with high enough data sample sizes. This data is also calculated at both a dwelling type and bedroom number level. This increases its relevance for investors, but it also means it will vary from commonly published house and unit median sale prices that include all bedrooms as consolidated median results. This report is designed to identify the suburbs where the average annual median prices have increased the most in the last two years following a period of two years of those suburbs having experienced average annual median price decreases. This shows suburbs with the biggest turnaround from negative to positive median prices but any median change should not be construed to mean that each house or unit in the suburb has increased in value by this percentage. You should always conduct additional due diligence on any property and the suburb it is located in to ensure it meets your investment criteria.

We have maximised accuracy by only publishing those suburb results with high enough data sample sizes. This data is also calculated at both a dwelling type and bedroom number level. This increases its relevance for investors, but it also means it will vary from commonly published house and unit median sale prices that include all bedrooms as consolidated median results. This report is designed to identify the suburbs where the average annual median prices have increased the most in the last two years following a period of two years of those suburbs having experienced average annual median price decreases. This shows suburbs with the biggest turnaround from negative to positive median prices but any median change should not be construed to mean that each house or unit in the suburb has increased in value by this percentage. You should always conduct additional due diligence on any property and the suburb it is located in to ensure it meets your investment criteria.

ABOUT THIS REPORT

This report was produced using live on the market sales and rental listing data for properties in suburbs that border a major body of water such as oceans, lakes or inland waterways. We have maximised accuracy by only publishing those suburb results with high enough data sample sizes. This data is also calculated at both a dwelling type and bedroom number level. This increases its relevance for investors, but it also means it will vary from commonly published house and unit median sale prices that include all bedrooms as consolidated median results. This report is designed to identify the suburbs where the average annual median prices have increased the most in the last two years following a period of two years of those suburbs having experienced average annual median price decreases. This shows suburbs with the biggest turnaround from negative to positive median prices but any median change should not be construed to mean that each house or unit in the suburb has increased in value by this percentage. You should always conduct additional due diligence on any property and the suburb it is located in to ensure it meets your investment criteria.

ABOUT THIS REPORT

This report was produced using live on the market sales and rental listing data for properties in suburbs that border a major body of water such as oceans, lakes or inland waterways. We have maximised accuracy by only publishing those suburb results with high enough data sample sizes. This data is also calculated at both a dwelling type and bedroom number level. This increases its relevance for investors, but it also means it will vary from commonly published house and unit median sale prices that include all bedrooms as consolidated median results. This report is designed to identify the suburbs where the average annual median prices have increased the most in the last two years following a period of two years of those suburbs having experienced average annual median price decreases. This shows suburbs with the biggest turnaround from negative to positive median prices but any median change should not be construed to mean that each house or unit in the suburb has increased in value by this percentage. You should always conduct additional due diligence on any property and the suburb it is located in to ensure it meets your investment criteria.
