

This report was produced using live on the market sales and rental listing data. We have maximised accuracy by only publishing those suburb results with high enough data sample sizes. This data is also calculated at both a dwelling type and bedroom number level. This increases it's relevance for investors, but it also means it will vary from commonly published house and unit median yields that include all bedrooms as consolidated median yield results. This report is designed to identify the suburbs where median prices are cheapest to illustrate entry-level homebuyer and investor opportunities. You should always conduct additional due diligence on any property and the suburb it is located in to ensure it meets your investment criteria.

This report was produced using live on the market sales and rental listing data. We have maximised accuracy by only publishing those suburb results with high enough data sample sizes. This data is also calculated at both a dwelling type and bedroom number level. This increases it's relevance for investors, but it also means it will vary from commonly published house and unit median yields that include all bedrooms as consolidated median yield results. This report is designed to identify the suburbs where median prices are cheapest to illustrate entry-level homebuyer and investor opportunities. You should always conduct additional due diligence on any property and the suburb it is located in to ensure it meets your investment criteria.

This report was produced using live on the market sales and rental listing data. We have maximised accuracy by only publishing those suburb results with high enough data sample sizes. This data is also calculated at both a dwelling type and bedroom number level. This increases it's relevance for investors, but it also means it will vary from commonly published house and unit median yields that include all bedrooms as consolidated median yield results. This report is designed to identify the suburbs where median prices are cheapest to illustrate entry-level homebuyer and investor opportunities. You should always conduct additional due diligence on any property and the suburb it is located in to ensure it meets your investment criteria.

This report was produced using live on the market sales and rental listing data. We have maximised accuracy by only publishing those suburb results with high enough data sample sizes. This data is also calculated at both a dwelling type and bedroom number level. This increases it's relevance for investors, but it also means it will vary from commonly published house and unit median yields that include all bedrooms as consolidated median yield results. This report is designed to identify the suburbs where median prices are cheapest to illustrate entry-level homebuyer and investor opportunities. You should always conduct additional due diligence on any property and the suburb it is located in to ensure it meets your investment criteria.
