

ABOUT THIS REPORT

This report was produced using live on the market sales and rental listing data. We have maximised accuracy by only publishing those suburb results with high enough data sample sizes. This data is also calculated at both a dwelling type and bedroom number level. This increases it's relevance for investors, but it also means it will vary from commonly published house and unit median yields that include all bedrooms as consolidated median yield results. This report is designed to identify the suburbs where median prices are the most expensive. You should always conduct additional due diligence on any property and the suburb it is located in to ensure it meets your investment criteria.

ABOUT THIS REPORT

This report was produced using live on the market sales and rental listing data. We have maximised accuracy by only publishing those suburb results with high enough data sample sizes. This data is also calculated at both a dwelling type and bedroom number level. This increases it's relevance for investors, but it also means it will vary from commonly published house and unit median yields that include all bedrooms as consolidated median yield results. This report is designed to identify the suburbs where median prices are the most expensive. You should always conduct additional due diligence on any property and the suburb it is located in to ensure it meets your investment criteria.

ABOUT THIS REPORT

This report was produced using live on the market sales and rental listing data. We have maximised accuracy by only publishing those suburb results with high enough data sample sizes. This data is also calculated at both a dwelling type and bedroom number level. This increases it's relevance for investors, but it also means it will vary from commonly published house and unit median yields that include all bedrooms as consolidated median yield results. This report is designed to identify the suburbs where median prices are the most expensive. You should always conduct additional due diligence on any property and the suburb it is located in to ensure it meets your investment criteria.

ABOUT THIS REPORT

This report was produced using live on the market sales and rental listing data. We have maximised accuracy by only publishing those suburb results with high enough data sample sizes. This data is also calculated at both a dwelling type and bedroom number level. This increases it's relevance for investors, but it also means it will vary from commonly published house and unit median yields that include all bedrooms as consolidated median yield results. This report is designed to identify the suburbs where median prices are the most expensive. You should always conduct additional due diligence on any property and the suburb it is located in to ensure it meets your investment criteria.

ABOUT THIS REPORT

This report was produced using live on the market sales and rental listing data. We have maximised accuracy by only publishing those suburb results with high enough data sample sizes. This data is also calculated at both a dwelling type and bedroom number level. This increases it's relevance for investors, but it also means it will vary from commonly published house and unit median yields that include all bedrooms as consolidated median yield results. This report is designed to identify the suburbs where median prices are the most expensive. You should always conduct additional due diligence on any property and the suburb it is located in to ensure it meets your investment criteria.

WA Report												
Rank	Suburb	State	Postcode	Dwelling Type	Bedrooms	Median Price	Median Price 1 yr Ago	Median Price Growth 1 yr	Median Rent	Rental Yield	Median Rent 1 yr Ago	Median Rent Growth 1 yr
